

Effective Resource Use Efforts in Production Processes

◆ Reductions in Packing Materials Used

From FY2006, we sequentially promoted a switch from cardboard to aircaps for bumper packing materials, which account for approximately half of packing material volume used. The switch was completed in FY2009.

In FY2010, this switch spread to all models, and resulted in great reductions.

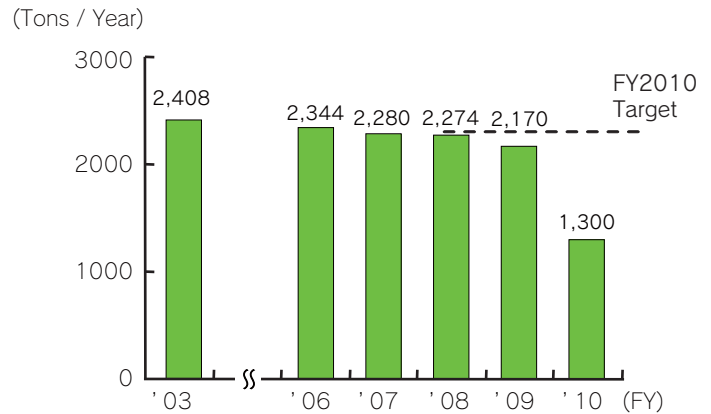

Packing by using aircaps

● Packing and Packaging Material Volume Used

[FY2010 Target]

Less than 2,280 tons/year

(5% reduction compared to FY2003)

◆ Reducing Water Volume

We are continuing to implement water savings in daily management activities that center on painting processes.

● Water Volume Used in Production Processes

[FY2010 Target]

Less than 4.5 m³ /vehicle

(20% reduction maintained compared to FY1995)
